

Dashboard Module - Test Cases (Week 4)

#	Test Case	Steps	Expected Result	Actual Result	Status
1	Get dashboard stats as Admin	GET /api/dashboard/stats with valid Admin Bearer token	200 OK, JSON with totalPatients, appointmentsToday, appointmentsThisWeek, pendingCount, statusBreakdown	200 OK, all fields returned with live values matching DB	Pass
2	Get dashboard stats without a token	GET /api/dashboard/stats with no Authorization header	401 Unauthorized	401 Unauthorized	Pass
3	Get dashboard stats as Staff	GET /api/dashboard/stats with a valid Staff Bearer token	403 Forbidden (Admin-only route)	403 Forbidden	Pass
4	Total patients count is accurate	Compare totalPatients value to actual count of Patients where IsActive = true in DB	Values match exactly	Matched (e.g. 4 active patients returned as 4)	Pass
5	Status breakdown reflects real appointment data	Compare statusBreakdown counts (Pending/Confirmed/Cancelled) to actual Appointments table grouped by Status	Counts match exactly, chart renders one bar per status with correct color (yellow/green/red)	Counts matched; chart rendered correctly with correct colors per status	Pass
